

# autoware MT<sup>®</sup>

## The Automated Multi Test Software

## autoware MT<sup>®</sup>

- Easily record test data from several network connected units in one central location
- Archiving test data for agency requirements
- Easily import test data into any spreadsheet or database program
- Compatible with the Associated Research Ethernet Communications Interface
- Source Code available for customization

## Automatically Monitor and Record Test Data from Multiple Instruments with Autaware MT.

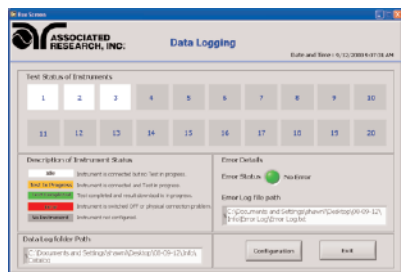

Autaware MT is an Associated Research test software that allows a user to monitor and record test data from up to 20 network connected OMNIA 8100 series instruments. It allows for logging and statistical analysis on results information collected from multiple instruments and test cells.

### Easily Review All Connected Testers

Once the software is installed and running it polls each of the connected instruments and downloads test results on each test file completion. The configuration screen allows a user to set-up the instruments and lists slots for the 20 instruments that can be monitored by the Autaware MT program. The user can specify a name and address to which the units connect. The user can also verify connection status and view model, serial and calibration information of the connected instruments. All of this allows for quick review of all network connected testers.

### Record Results and Log Data

The Data Logging function of the software allows the user to connect to any enabled instrument and begin polling the instrument status. The user can view the status of each connected instrument graphically and easily see communication errors, instrument configurations and more. All results being recorded are automatically stored. Once the data logging is complete the file will automatically be saved to a default or user-specified location. The file is a tab delimited text file that can be viewed with any standard text editor or imported into a spreadsheet application for analysis.

### Quick and Easy Installation

This software specifically controls multiple OMNIA 8100 series instruments via Ethernet. It installs quickly and easily on any system with Windows 9x, 2000, XP or Windows NT.

- Customer support & technical services
- 5-Year extended warranty\*
- 24-Hour turn-around on calibrations
- Expert training & industry education programs
- Local sales offices throughout the world
- ISO 9001 Registered & ISO 17025 Accredited

\*With annual calibration from Associated Research.
